Determn. of sex of ruminant embryos-by hybridisation assay using specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       District 19 19 37pp; French.

This sequence is used as a probe and is contained in plasmid pSP64.2 5EI. This sequence is used as a probe and is contained in plasmid pSP64.2 5EI. It is homologous to the sequence of a 2.5 kb fragment of the Per gene of Drosophila. The motifs ACNGGN and/or TCAGGC (N=T, U, G, A, or C) or their complementary sequences are repeated in the probe. It is used in a hypridistation assay to determine the sex of ruminant embryos. Either (i) Southern or (ii) Dot-blot techniques can be utilised and Y-chromosome shows up as intense signal either obscuring most of the hybridisation track in (i) or surrounding the dots in (ii). Significant results can be obtd. using samples of less than 50 ng weight.

X20500-21243 represent polynuclectide sequences from the genome of Treponema pallidum. The sequences can be used for detection, diagnosis, characterisation, prevention and therapy for T. pallidum infections, particularly syphilis. They can also be used for detecting diseases related to Borrella infections in animals, and for the production of biosynthetic products such as enzymes. DAD-CANT9 includes CAW promoter, modified DHFR gene, splice donor and acceptor sites, Sv40 early adenylating signal, Sv40 origin, and multicloning site. The 5'-non-coding region of human IFNalpha 2C-encoding CDNA was replaced with the non-coding region of human beta-globin mRNA using PCR. A PCR product of 0.64kb resulting from HindIII and XbaI restriction enzyme digests was isolated and ligated into appropriate restriction enzyme sites of plasmid pAD-CMV19. E.coli HB101 were transformed with the ligation prods. and an expression plasmid pAD-BAD19-IFN secreting O-glycosylated human IFN-alpha 2C was identified. See also Q20764-66 and Q22517-29.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                16-JAN-1992.

Tumour treatment and to understand mechanisms to rused in tumour treatment and to understand mechanisms to INF action blast style (1-4); Slpp; German.

Tumour treatment and to understand mechanisms to INF action blast style (1-4); Slpp; German.

Disclosure; Fig 6(1-4); Slpp; German.

In produce INF-BPIS (16282) is one of 30 positives clones in a screened cDNA library from induced INF-induced fibrosarcoma cells. A INF-BP had been isolated from the unithe of patients with uraemia and probes/primers were constructed from the determined amino acid sequence.

To produce a vector expressing a soluble form of TNF-binding constitution in this plasmid was cut with Xmm1, amplified by PCR and the amplified DNA cut with BamHI and EcoRI.

The resulting 0.75 kb DNA fragment was inserted into pT7/T3 alpha-19 (BRL) cut with the same enzymes to recover pINF-BP. This was cut with BamHI and EcoRI, and the recovered fragment inserted into pab-CMV1 to give the required plasmid paprNF-BP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    T 29-7AN-1991 (first entry)

0-glycosylated alpha-interferon - used for treatment of viral of tumour diseases
Disclosure; Fig 7 (A-D); 104pp; English.
A DNA sequence encoding IFN-alpha may be inserted into pAD-CMV19 and the recombinant prod. used to transform cells of a multicellular organism, pref. a vertebrate. The cell supernatant is harvested and the O-glycosylated prod. recovered by known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ë

O-glycosylated alpha-interferon, used as medicament - isolated following secretion into conditioned medium of mammalian cells contq. a suitable expression plasmid oblisclosure; Fig 11(A-D): 24pp; German. Plasmid pAD-CMV1 is formed from pCDM8, psv2gptDHFR20 and pBluescript SK+. The multi-cloning site is useful for the insertion of heterologous DNA, e.g. IFN. The plasmid is replicable in E.coli. See also 020764-66 and 025177-29. Sequence 6414 BP; 1677 A; 1563 C; 1557 G; 1617 T;

This expression plasmid contains an intron sequence between the multi-cloning sequence and the poly(A) site. Variations may be multi-cloning sequence and the poly(A) site. Variations may be made from pAD-CWVI, according to the amt. and position of introns w.r.t. the multi-cloning site. For example, pAD-CWVI9 (020732) comprises only one intron between the CWV promoter and the multi-cloning site. A DNA sequence encoding IFN-alpha may be then be inserted into pAD-CWVI9 and the recombinant prod. used to transform cells of a multicellular organism, pref: a vertebrate. The cell supernatant is harvested and the 0-glycosylated prod. recovered by

Example; Pages 107-112; 170 pp; German.

Example; Pages 107-112; 170 pp; German.

Franside for the expression of genes or cDNA under the franscription control of genes or cDNA under the for hygromycin B resistance were constructed from expression plasmids pah-CMV1 and pah-CMV2 (EPA sigh sigh) and path-CMV1 and pah-CMV2 (EPA sigh sigh) and pathore cet al 1985). Plasmid pahlygCMV1 contains the many features, given in FT. Plasmid pahlygCMV2 differs from pahlygCMV1 only in respect of the polycloning site. 'N' in quality associated in the patent application was illegible.

Sequence printed in the patent application was illegible.

Sequence 6630 BP; 1655 A; 1704 C; 1628 G; 1643 T;
inositol-1,4,5-tri:peptide and di:acyl:glycerine(s)
Example: Pages 102-107: 170 pp. German.
Plasmids for the expression of genes or cDNA under the
transcription control of CMV promoters/enhancer and selectable
for hygromycin B resistance were constructed from expression
plasmids pAD-CMV1 and pAD-CMV2 (EPA 393 438) and pHEBO (Sugden
et al 1985). Plasmid pAHyGCMV2 contains the many features,
given in FT. Plasmid pAHyGCMV2 differs from pAHyGCMV1 only in
respect of the polycloning site. 'N' in q43360 denotes where the
sequence printed in the patent application is illegible.

X20500-21243 represent polynucleotide sequences from the genome of Treponema pallidum. The sequences can be used for detection, diagnosis, characterisation, prevention and therapy for T. pallidum infections, particularly syphilis. They can also be used for detection diseases related to Borrella infections in animals, and for the production of blosynthetic products such as enzymes. Sequence 6993 BP; 1914 A; 2019 C; 1404 G; 1647 T;
                                                                           DS-MX1-1999 (first entry)
Polynucleotide sequence from the genome of Treponema pallidum.
Treponema pallidum infection; syphilis; Borrelia infection; animal;
enzyme production; ds.
Treponema pallidum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Location/Qualifiers

Example 1; Fig 2; 118pp; Endlish.

Plasmid pBgal/EK/cfiL-6 contains a DNA sequence which encodes a cusion protein comprising beta-galactosidase, followed by an enterokinase cleavage site, which is, in turn, followed by an enterokinase cleavage site, which is, in turn, followed by an enterokinase cleavage site, which is, in turn, followed by a synthetic IL-6 peptide sequence. The IL-6 mutein sequence is that the four cysteine residues, which occur at positions 45, 51, 74 and 84 of the mature full-length IL-6 molecule are replaced by serine residues. A truncated 0.58kb cysteine-free IL-6 sequence lacking the first 4 N-terminal most can be isolated by EcoRII-HindIII digestion. The fragment was used in the preparation of various IL-6 muteins, either full-length con N-terminally truncated. It was found that restoring the last two cys residues (at positions 74 and 84) resulted in a mutein which retained IL-6 activities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                089359;

Prepare worsels worsels with two cys residues replaced and opt. N-terminal deletion, can be produced in high yield and are more active than native protein, useful e.g. as immuno-therapeutic or anti-inflammatcry agents

Frample 2; Column 31-34; 41pp; English.

Correspond to the invention. IL-6 is also known under numerous synonyms, including interferon-beta-2 (IFN-B2), B-cell stimulation factor (BSF-2), and hepatocyte stimulating factor (HSF). The mutein of the invention.

Correctin, and hepatocyte stimulating factor (HSF). The mutein IL-6 protein, and hepatocyte stimulating cells, to stimulate proliferation and differentiation of B or T cells, megakaryocytes or multipotent correcting the progenitor cells. The muteins can also induce acute phase proteins in liver cell. The proteins can be used as immunotherapeutic conferent patients undergoing chemotherapy or bone marrow transplantation. Correcting and anti-inflammatory agents, in the treatment of thrombocytopaenia, and to treat patients undergoing chemotherapy or bone marrow transplantation. By eliminating 2 of the Cys residues, purification and isolation of IL-6 is simplified, as only one Cys-Cys disulphide bond can form during comparison to wild type IL-6. By removing the hydrophobic N-terminus, the yield can be further improved. The mutein sof the invention correction which have 22 N-terminal residues deleted have activity 250-400 times that the protein and some control of the comparison of the protein and activity 250-400 times that the comparison of the protein and the control of the c

Talcium signal-modulating cyclophilin, and DNA encoding it - useful for diagnostic purposes, and for identifying agents for modulating the calcium-induced activation pathway.

The calcium-induced activation pathway.

Claim 1; Page 20-21; 33pp; English.

Claim 1; Page 20-21; 33pp; English.

Claim 1; Page 20-21; 33pp; English.

This sequence encodes human calcium signal-modulating cyclophilin ligand (CAML). It may be used as a probe to identify CAML genes in effect on CAML expression, to provide antisense sequences to hosts other than human, in diagnosis, to screen agents, to produce investigate cellular responses to external agents, to produce recombinant capacity. Any also be used to express a fragment of the CAML protein, and to express a fragment of the CAML may also be used to screen putative modulators of the calcium-activated pathway for their effects on expression of one or more genes under regulatory control of the pathway. Host cells for expression of recombinant CAML include Escherichia coli, capacitate the role of CAML are usually mammalian cells used to investigate the role of CAML are usually mammalian cells.

Claim-activated pathway for their are usually mammalian cells used to investigate the role of CAML are usually mammalian cells.

Claim-activated pathway for the pathway can include the role of CAML are usually mammalian cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 therapeutic contraception, infertility, learning and memory disorders and the like.

   Will 99 - 20 follogonucleotide primers and probes - for detection, dentification and quantification of bacteria, fungi and bacterial dentification and quantification of bacteria, fungi and bacterial antification and quantification of bacteria, fungi and bacterial claim 19; Page 108; 167pp; English.

The present sequence represents an antibiotic resistance gene blaz (resistant to beta-lactams), and was used to design PCR primers (resistant to beta-lactams), and was used to probes and/or amplification primers which are specific, ubiquitous and sensitive for determining the presence and amount of nucleic acids from a bacterial antibiotic resistance gene and specific bacterial and fungal species in any sample suspected of containing the bacterial or fungal nucleic acids, where each of the nucleic acid or variant or part comprises a selected target region hybridisable with the probes or primers and detecting the presence of hybridised probes or amplified products as an indication of the presence of the specific bacterial or fungal species and bacterial antibiotic resistance genes. The methods and products can be used to detect and identify the bacterial and fungal species and genera and determine the bacterial resistance to antibiotics.

/note-"Organ: colon; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Plasmid DNA from the normalized library NCI_CGAP_CO10 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              M.D., Ph.D. CDNA Library Preparation: M. The sequence tag present in the cDNA between the NotI site and the
Oligo-dr track served to identify it as a clone from the normalized
adult 12-Day-Embryo library. CDNA Library Preparation: M. Fatima
Bonaldo, Ph.D. Clone distribution: clones will be available through
Research Genetics This clone is also available through the
I.M.A.G.E. Consortium at LLNL (info@image.llnl.gov). IMAGE

polylinker: Site_1: Not I; Site_2: Eco RI; The UI-R-C2
library; which is a subtracted library derived from the
UI-R-C0 library. The UI-R-C0 library consisted of a
mixture of individually tagged normalized libraries
constructed from rat placenta, adult lung, brain, liver,
kidney, heart, spleen, ovary, muscle, 8, 12 and 18-day
embryo. The tag is a string of 3-5 nucleotides present
between the Not I site and the oligo-dT track which allows
identification of the library of origin of a clone within
the mixture. The subtracted library (UI-R-C2) was
constructed as follows: PCR amplified cDNA inserts from
UI-R-C1 clones from within 3' Sirgh abeen derived was
used as a driver in a hybridization with the UI-R-C1
library in the form of single-stranded circles. The
remaining single-stranded circles (subtracted library) was
purified by hydroxyapatite column chromatography,
converted to double-stranded circles and electroporated
into DHIOB bacteria (Life Technologies) to generate the
UI-R-C2 library. This procedure has been previously
described (Bonaldo, Lennon and Soares, Genome Research 6:
791-805, 1996,
                                                                                                                                                                                                                 1 (bases 1 to 345)

```
This is a second to the factor of the factor
                                               Example 13; Page 32; 80pp; English.
R83061-R83085, R83090-R83096 and R92907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence corresponds to residues 60-84 of the alpha-1 domain of the class I MHC HIA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       12-NOV-1996 (first entry)

Treating autofimmure diseases

Example 1: Page 19: 41pp; English.

Peptides Wi3784-98 and Wi3778-9 were assayed for their immunomodulating activity. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or creminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula; A-B, where A, B = (C-terminal amidated compound comprises the formula; A-B, where A, B = (R aa76-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa80 = E or V; aa77 = C, S or N; aa79 = R or G; aa80 = I or N; aa76 = E or V; aa77 = C, T or C, aa70 = R or L; aa83 = G or R; and a represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a Class I HIA-B alphal domain (positions 79-84). They can be used to inhibit cyctoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or I new form also be used in combination with antigenic peptides or proteins of interest to activate CTLs. They can also inhibit the proliferation of T cells in response to an II-C33. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, consulting the products can also be consulted to the products can also be consulted to the consultation of transplants or proteins of treating autoimmune and the products can also be
                                                                                                                                                                                                                                                                                                                                             19-JUN-1998 (first entry)
Peptide B2702.60-84 tested for immunomodulating activity.
Immunomodulating dimer; immunosuppressant drug; CTL activation; transplantation; autoAmmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   R41221;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Such DNA, antigen or antibody
Disclosure; Page 5: 5pp; German.
The DNA may be used as a hybridisation probe for detecting the HLA
B27 gene, eg for assessing susceptibility to rheumatic disorders
such as ankylosis spondylitis, or may be used to transform cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNA coding for antigen HLA B27 - and diagnostic reagents contg.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Example 13; Page 32; 80pp; English.
R83061-R83085, R83090-R83096 and R93907-F92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence corresponds to residues 60-84 of the alpha-1 domain of the class I MHC acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLs)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               16-MAY-1996 (first entry)
HIA-B2702 CTL modulating peptide (B2702.60-84).
Cytotoxic T lymphocyte: CTL; major histocompatibility complex; MHC;
immunosuppressant; graft versus host disorder; transplantation; therapy;
class I MHC; HLA-B2702.
                                                                                                         modulating cytotoxic T-lymphocyte activity towards targets
Example 13; page 39; 61pp; English.
The peptide is used to modulate cytotoxic T-lymphocyte (CTL)
activity, either by inhibition or stimulation. It can be used for
inhibiting CTL toxicity in transplantations, for inducing CTL
inhibiting CTL coxicity in transplantations, for inducing CTL
infection. The peptide can also be used for identifying CTLs which
bind to it and removing subsets of CTLs from T reell composition.
This peptide is derived from the HLA B2705 antigen and corresponds
to the amino acid positions 60-84 of that antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

Cytotoxic T lymphocyte; #Ti. major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA coding for human histocompatibility antigen HIA-B 27 - useful for diagnosis and antigen and antibody prodn.

Disclosure: p6: 13pp; German.

THE DNA may be used to detect the HIA-B 27 gene (opt. mutated) in human genetic material. The HIA-B 27 may be used to detect anti-HIA-B 27 antibodies in human serum. The antibodies may be used to detect anti-HIA-B 27 antibodies in human serum, eg for diagnosis of rheumatic disorders, esp. ankylosing spondylitis.
                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
for prodn. of HLA B27. The HLA B27 may be used to detect HLA B27 antibody in human serum, or to produce mono- or polyclonal HLA B27 antibodies for use in immunoassay. Sequence 337 AA;

Treatment and diagnosis of HLA-dependent autoimmune disease - using peptide(s) derived from HLA-B27 or human keratin VI, e.g. for intis, uveitis, rheumatic disease etc.

PT 1111s, uveitis, rheumatic disease etc.

PS Claim 2. Page 9; 57pp; German

CW 58992-W55001 are peptides isolated from the alpha-1 or alpha-2 domain with 9992-W55001 are peptides isolated from the alpha-1 or alpha-2 domain cof HLA-B27 or human keratin IV and are used in methods for diagnosis and/or treatment of HLA, (human leucocyte affigen)-dependent autoimmune diseases. Such as such as a conflor treatment of HLA-B27

CG class I and II-associated autoimmune diseases, especially non-HLA-B27

CG class I and II-associated autoimmune diseases, especially non-HLA-B27

CG class I and II-associated autoimmune diseases, such as arbitis, uveitis, psoriatic arthritis or juvenile rheumatic arthritis and arbitis, uveitis, psoriatic arthritis or juvenile rheumatoid arthritis and HLA-B27 diseases (iritis, uveitis, psoriatic arthritis or juvenile rheumatoid arthritis and tha-B27 diseases (orally, or as nasal or pulmonary spray). This method results in antigens that are more specific than complete protein antigens, so provide a more exact classification of disease, they also have better solubility. Compared with complete proteins, peptides are easier to propage of production, have better storage stability when dry, are less likely to cause allergy and have a regulatory effect on the immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                              Disclosure; Page 9; 80pp; English.
R83061-R83085, R83090-R83096 and R82907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLs) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      30-JUL-1998 (first entry)

Human HLA-B27 alpha-1 domain (aa. 60-80) peptide B27PA.

Human leucocyte antigen; HLA; alpha-1 domain; alpha-2 domain; HLA-B27;

Keratin VI; diagnosis; treatment; HLA-dependent autoimmune disease;

Class I-associated autoimmune disease; iritis; uveitis; psoriasis;

Class II-associated autoimmune disease; rheumatic disease; arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

While Cycloytic activity and differentiation of CTLS.

Tompsons. comprising lymphoid surface membrane proteins - which may inhibit cytolytic activity and differentiation of CTLS.

Example: Page 9: 29p; English.

R95413, and R95415-R95431 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the HLAB38.6084. These sequences can be used to isolate the protein p74 from a T-cell lysate. P74 lis a T-cell surface membrane protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein HSc70. P74 is found in a cells. P74 can be isolated by lysis of a suitable cell with an amphoteric detergent, and then passed through an affinity column colls. P74 can be isolated by lysis of a suitable cell with an amphoteric detergent, and HA-B2702 palindromic peptide.

CC ontaining a covalently bound HLA-B2702 palindromic peptide.

CC containing a covalently bound HLA-B2702 palindromic peptide.

CC compositions comprising the extracellular fragment of P74 combined with the extracellular portion of P74, and determining the amount of binding between the candidate compound and P74.

CC T-cells, by combining them with the extracellular portion of P74, and determining the amount of binding between the candidate compound and p74.

CC T-cells, by combining them with the extracellular portion of p74, in an amount sufficient to compete containing T-cells and antigen presenting cells (APCS), by adding to the containing T-cells and antigen presenting cells (APCS), by adding to the containing T-cells and antigen presenting cells (APCS), by adding to the containing T-cells and antigen presenting cells (APCS), by adding to the contain the binding of the P74, in an amount sufficient to compete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
HIAB38. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the Sequence 25 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               HLAB38.6084.
